ALWAYS READY TO ROLL

WWW.TAPE-TAB.COM

OUR STORY

Tape-tab's creator couldn't take one more minute trying to use a roll of tape that kept re-adhering to itself! Since most rolls of tape are sold without a dispenser, finding a solution became an intriguing challenge for her. Working with her husband, the Tape-tab concept went from napkin sketches, to clay modeling, to CAD software, to 3D printing and then to rapid prototyping — all before final manufacturing. We manufacture and assemble in Virginia to ensure our product is made with quality. The Tape-tab is patent pending.

ABOUT THE PRODUCT

With its one-piece construction, grip end and bladed edge, Tape-tab is the simplest of useful tools. They can be used with many types of adhesive tapes including those for crafting, wrapping, and packing. Tape-tabs are also useful in education, medical, business, and commercial environments.
